

A SPECIALIST PARTNERSHIP TO PROVIDE CUSTOMIZED WEATHER SOLUTIONS

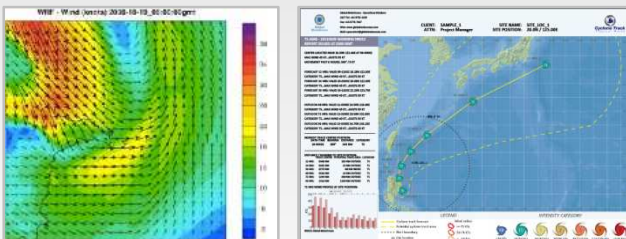

Global MeteOcean provides meteorological and oceanographic 24/7 real-time support to help with decision making process for safety purposes and scheduling of all operational weather sensitive activities.

Support to marine operations:

- Pipe installation
- Drilling operations
- Towing structures
- Submarine cables laying
- Heavy lifts
- Navigation,....

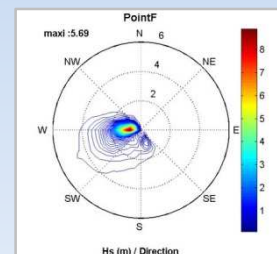

Weather@Sea360: complete, first class, 24/7 service dedicated to the provision of weather support to yacht captains, managers or operation directors of maritime navigation companies

Global MeteOcean
Patrick Dupuis - +65 6304 5317

Actimar provides oceanographic and meteorological (metocean) services for offshore and coastal engineering applications, through studies, consultancy, information systems and forecasting services

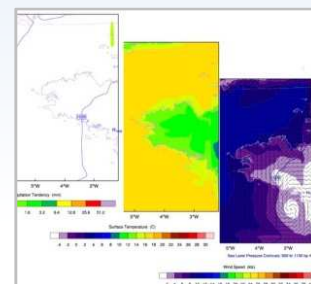

Design criteria and marine operations scheduling:

- Design criteria in accordance with international standards
- Long term planning
- Fatigue assessment

Dedicated statistical and modelling approach:

- Hindcast, in-situ measurements, satellite observations
- Numerical modelling (weather, sea states, hydrodynamical models)

A SPECIALIST PARTNERSHIP TO PROVIDE CUSTOMIZED WEATHER SOLUTIONS

COMPLEMENTARY SKILLS AND EXPERIENCE

Global MeteOcean: Team of 8 meteorological and oceanographic specialists with WMO certification (World Meteorological Organization) and expertise in various complex weather patterns around the world from polar to tropical and subtropical areas.

Actimar: Team of 30 graduated oceanographers, scientists and engineers with an expertise in the physics of the oceanographic processes, in data analysis, numerical modelling, remote sensing and real time operational systems

The range of expertise areas within the marine environment sector includes:

- Analysis and numerical modelling of tides, oceanic currents, winds and sea states
- Design and implementation of operational systems for oceanic environmental analysis and forecasting
- High resolution remote sensing applied to coastal zone management and deep ocean mapping
- Both companies have a significant experience in the Oil and Gas industry support and in the renewable energy industry support.
